

SpinRDR

Ransomware Detection and Response for M365 and Google Workspace

SpinRDR helps organizations get fast incident response and slash SaaS ransomware downtime from months to hours with AI-driven Ransomware Detection & Response.

As a result, you can reduce downtime up to 2 hours and recovery costs to 90%. 2 hours incident response is our official IR SLA - the fastest incident response for SaaS data against ransomware attacks on the market.

Challenge

When it comes to ransomware attacks, it's not if; it's when. 73% of ransomware attacks are successful — and come with costly downtime that can take weeks or months due to API limitations of SaaS providers.

In an evolving threat landscape, organizations need fast incident response SLAs and minimized RTO/downtime.

With SpinRDR

Key Capabilities

2 hours IR SLA

The fastest Incident Response on the market for SaaS ransomware attacks

24/7 Ransomware Monitoring

AI-driven ransomware behavior detection to identify and stop an in-progress ransomware attack on your M365 or Google Workspace SaaS data

Automation

Fully automated monitoring, detection, alerting, and response. No human factor required.

API Integration with 3rd-party vendors

Advanced API integrations are available with Splunk, ServiceNow, Jira, Datadog, Teams, and Slack to customize notifications on detected incidents from a single dashboard.

Customer Use Cases

Software Development Company Defends Against External Threat with Automated Ransomware Protection

This organization's developers and designers regularly share files with customers outside of their organization. They realized there are over 3,000,000 files they store in their SaaS environment and this number keeps growing every month so in case of ransomware attack a traditional recovery process may take them up to a month. They saw a need to reduce downtime and recovery costs in case of ransomware and prepare the company for a new wave of zero day attacks.

With SpinOne, they have an automated line of defense against ransomware — and data sharing management policies to revoke sharing to unauthorized external users.

“SpinOne has been a game changer from day one. We were drawn to Spin.AI's platform because it was so easy to set up and manage. With SpinOne, we have full transparency into what's happening in the environment and can enforce policies that are stronger than ever before.”
