

Conversational AI Platform Amplifies Google Workspace Data Security with SpinOne

As a leader in conversational ai, this organization relies on Google Workspace for email, calendars, contacts, and file sharing across all departments for business continuity.

CHALLENGES

Secure Data in Google Workspace

The challenges this organization faced was twofold: first, to establish a reliable backup system for several terabytes of SaaS data, and second, to ensure the security of this data — especially personally identifiable information (PII).

The right solution would need to have:

- **Speed** for fast data backup and recovery, and for fast time-to-value
- **Actionable alerts** to monitor sensitive data and notify the team to take action it needed
- **User-friendly data search capabilities** to acquire the information they needed quickly and efficiently without digging through piles of data
- **Automatic enrollment** to ensure that once an account was added, backup started immediately based on set policies — a feature other vendors lacked
- **Data archiving** to ensure that when an employee was offboarded, other employees could still access historical data where needed

“

With SpinOne, we're able to get full visibility and take action on alerts if needed. It's more than a nice-to-have, it's a need-to-have. SpinOne is a huge time-saver for our team and brings immediate ease of mind.

SOLUTION

SpinOne for Google Workspace

This organization evaluated several vendors and selected Spin.AI's SpinOne platform due to its positive customer reviews, its unique capabilities, and its fast and reliable customer support. Using SpinOne, including Backup & Recovery, Ransomware Detection & Response, and DLP, they now have:

- **Automated, fast, accurate, and granular backup** and recovery for all Google Workspace data
- **Complete visibility** into when sensitive data is shared, where it is shared, and by whom
- **Configurable alerts** that trigger automated policies to provide visibility and incident response
- **Easily accessible archived data** for off-boarding employees, so accessing any information from archived accounts is simple and easy to retrieve
- **Automated policies for external file sharing** for partners and vendors using shared drives

“

SpinOne saves our team from having to manually log in and check a portal several times throughout the day — it's been such a time-saver. It's also given us peace of mind, knowing that it's saving us time and money, and eliminating the risk of human error.

IT Manager

RESULTS

By addressing the challenges of SaaS data backup, security, and visibility, this organization has enhanced its Google Workspace data protection and reinforced its commitment to meeting the highest standards of data security in an ever-evolving cybersecurity landscape.
