

SpinOne App Risk Assessment

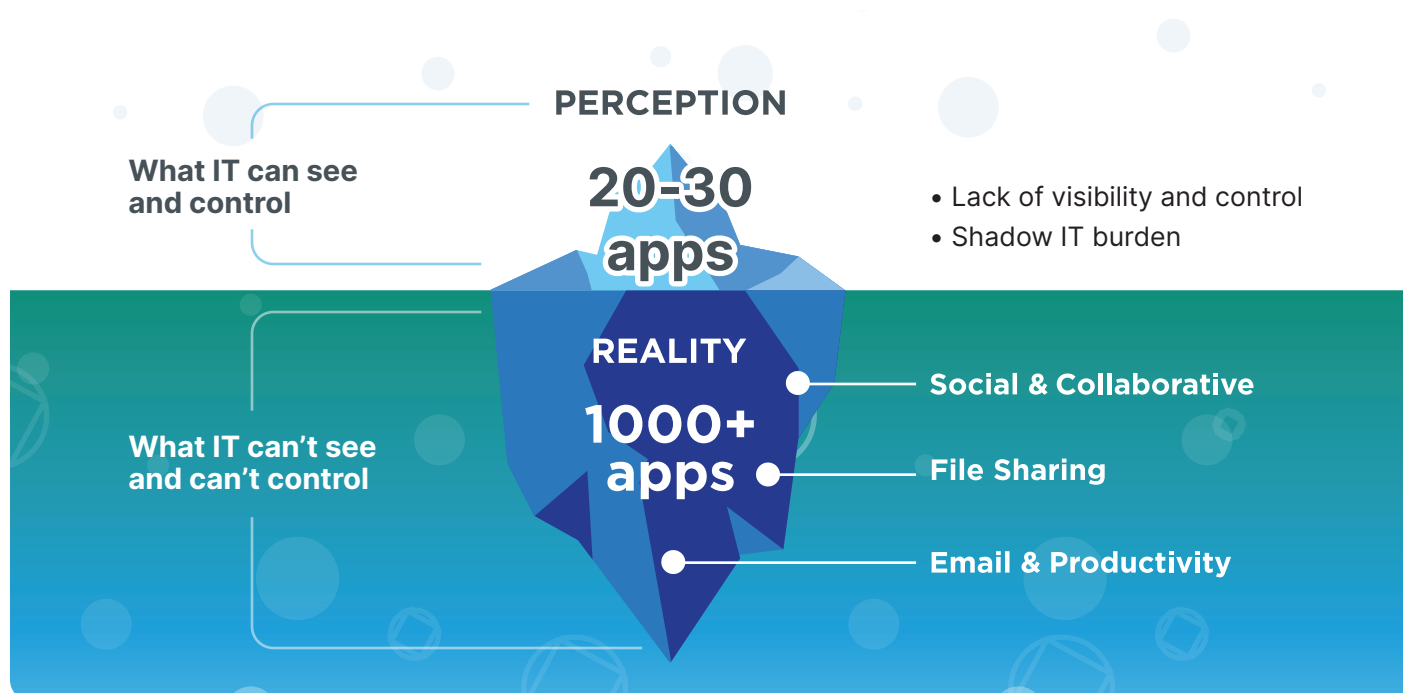

Identify unsanctioned SaaS apps, mobile apps, cloud apps, or browser extensions that have access to your mission-critical SaaS data, and assess risk to reduce security, compliance and data leak/loss risks.

Challenge

How do organizations manage access for apps or browser extensions that have access to business critical SaaS data?

A perceived 20–30 apps on the surface can, in reality, be thousands of unsanctioned apps and browser extensions with dangerous access levels. SecOps teams can't control what they can't see. Any lack of visibility leaves your critical SaaS data vulnerable to potentially devastating security, compliance, and data loss risks.

Key Capabilities

**Shadow IT Discovery
with 300,000+ Apps &
Extensions Assessed
by Our AI-Algorithms**

**Full Visibility of All Third-party
Apps in Your Google Workspace
or M365 Environment in
One Dashboard**

**Automatically Assess Business,
Security, & Compliance Risks**

**Identify Users That Have Access
to These Applications**

**Automated & Continuous Risk
Assessment & History**

**Misconfiguration
Detection & Response**

**Allowlist/Blocklist Using
Configurable Automated
Policies & Customized Alerts**

**Integration with Splunk,
ServiceNow, Jira,
Slack, & DataDog**
